        This sequence was finished as follows unless otherwise noted: all regions were double-stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed
                                                                                                                                                                                                                                                                                                                                                Submitted (20-OCT-2001) NIH Intramural Sequencing Grovement Circle, Gaithersburg, MD 20877, USA On Oct 20, 2001 this sequence version replaced gi

Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: This is a 'working draft' sequence. It currently consists of 17 contigs. The true order of the pieces is not known and their order in this sequence record is ranks of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

```
This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
restriction digest.
```

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
Mapping information for this clone was provided by Dr. John D.
MCPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc

### SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P. J. (1998). An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute

(http://bacpac.med.buffalo.edu)
VECTOR: pBACe3.6
VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the right is ACO24637. Actual start of this clone is at base position 1 of RP11-299120; actual end is at base position 166424 of RP11-299120.

The sequence  $H_{\rm N}$ NH0299I20 from base position 1387I2 to 140784 contains a tandem repeat. The tandem size is believed to be in agreement with digest information.

The sequence  $H_{\perp}NH0299120$  from base position 141597 to 143830 contains a tandem repeat. The tandem size is believed to be in agreement with digest information, however, the sequence fidelity cannot be guaranteed.

The sequence H\_NH0299120 contains a variable CT run from base position 60019 to 60385. The sequence fidelity cannot be guaranteed and digest information suggests 400 bases may be missing.

                                                                                                                                                                                                                                                                gi:15624963
```

clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >> 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

## MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

### SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

## NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-145M22; the clone sequenced to the right is RP11-219H23. Actual start of this clone is at base position 1 of RP11-353K11; actual end is at base position 199721 of RP11-353K11.

The region from 147655 to 147703; 147819 to 147875 are only covered by pcr products from clone DNA. Single subclone region exist between 147951 and 147966. Polymorphisms exist between AC068539 and AC092636. Data from AC068539 and AC079395 was used to finish AC092636.

The sequence of AC068117 has been incorporated into AC092636 S Location/Qualifiers

* NOTE: This is a 'working draft' sequence. It currently

* consists of 7 contigs. The true order of the pleces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Center

provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and in pharmacogenomic analysis. The peptides are also useful for treating a disorders characterised by absence of, inappropriate or unwanted expression of the protein. The nucleic acids are also useful in drug screening assays and as a target for treatment by the compounds identified through drug screening. The invention also provides vectors for gene therapy in patients with aberrant expression of the gene encoding the transporter protein. The gene of the invention has been found to be expressed in humans in the kidney, testis, heart, placenta, small intestine and liver. The gene has been localised to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     exon
                                                                                                                            The invention relates to an isolated human transporter protein trelated to the zinc transporter subfamily. Polynucleotides and polypeptides of the invention are useful for treating a disease
                                                                                                                                                                                             Novel human transporter proteins, related to zin subfamily, useful as model for developing human serves as target for human therapeutics -
                                                                                                                                                                                                                                                                                                                                                                                                                                        exon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       exon

```
The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of CC the 5602 nucleotide sequences defined in the specification, where the CC coligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprises a 3'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence is selected from those defined in CC the 5'-end sequence, at least 15 nucleotides and the combination of the 5'-end sequence, of the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13672 represent human omno acid sequences; AAA9246 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-JUL-1999;

                                                                                                                                                                                                                                                                       Q
                                                                                                                                                                                                                                                                                                                                                                                           full length cDNAs defined in the specification. Where a primer set C comprises: (a) an oligo-dr primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the CC onplementary strand of a polynucleotide which comprises a 5'-end CC sequence and an oligonucleotide comprises a 3'-end sequence complementary to a CP polynucleotide which comprises a 3'-end sequence complementary to a CP polynucleotide comprises a 3'-end sequence, where the CC oligonucleotide comprises a 3'-end sequence, where the SP cend sequence, and the combination of the 5'-end sequence, and the combination of the specification. The primer sets can be used in antisense therapy and CC the specification. The primer sets can be used in antisense therapy and CC the specification and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAB95893 represent human cDNAs sequences; AAB9246 to CC CAB95893 represent human amino acid sequences; AAB9246 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            뭐
CC g34665, sbg2, g35017 and g35018 nucleat acid sequences located on the human chromosome 13g31-q33 locus. The nucleotide sequences located on the biallelic markers and polymorphisms. Sequences AAH51602 - AAH51626 and CC AAB62907 - AAB52915 represent cDNA human sbg1 cDNA sequences and protein products. AAH51627 - AAH51631 and AAB62916 - AAH51632 - AAH51639 are used to isolate sbg1 cDNAs, while sbg1 exons from different primates are represented by sequences AAH51642 - AAH51699. Nucleotide sequences of CC amplicons which comprise biallelic markers located on the chromosome CC 13g31-g33 locus are represented in AAH51690. AAH51817. Biallelic markers are represented in the sequences by degenerate/undefined base codes. PCR CC primers AAH51818 and AAH51819 are used in the isolation of sequences of the invention. The biallelic marker containing nucleotide sequences are used to determine the identity of the nucleotide at a biallelic marker in a sample DNA sequence. The nucleotide sequences may be labelled and used for genotyping by determining the identity of a nucleotide at a Region CD -related biallelic marker in a biological sample from single or multiple subjects. By determining the frequency of a biallelic marker in a population an association between a genotype and a trait, a haplotype and contain the sequences can be detected. The sequences can be
                                                                                                                                                                                                                                                                                                                                                                                                                              Cohen D, I

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        amplicons which comprise biallelic markers located on the chromosome 1331-q33 locus are represented in AAH51700 -AAH51817. Biallelic markers are represented in the sequences by degenerate/undefined base codes. PCR primers AAH51818 and AAH51819 are used in the isolation of sequences of the invention. The biallelic marker containing nucleotide sequences are used to determine the identity of the nucleotide at a biallelic marker in a sample DNA sequence. The nucleotide sequences may be labelled and used for genotyping by determining the identity of a nucleotide at a Region D-related biallelic marker in a biological sample from single or multiple subjects. By determining the frequency of a biallelic marker in a population an association between a genotype and a trait, a haplotype and a trait and a phenotype and a trait can be determine a predisoposition to or early onset of schizophrenia or bipolar disorder or a beneficial response to or side effects related to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAB62907 - AAB62915 represent cDNA human sbg1 cDNA sequences and protein products. AAH51627 - AAH51631 and AAB62916 - AAB62918 represent g35018 cDNA sequences and protein products. Primers AAH51632 - AAH51699 are used to isolate sbg1 cDNAs, while sbg1 exons from different primates are represented by sequences AAH51642 - AAH51699. Nucleotide sequences of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              markers are used for genotyping and detecting schizophrenia or bipolar disorder and predisposition to these disorders \boldsymbol{\cdot}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g34665, sbg2, g35017 and g35018 nucleic acid sequences located on the human chromosome 13q31-q33 locus. The nucleotide sequences contain biallelic markers and polymorphisms. Sequences AH51602 - AH51626 and biallelic markers
                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1386 BP; 426 A; 319 C; 297 G; 332 T;

The sequences can be used in the treatment of cardiovascular, urinary system reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a
        Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a prinvolves detecting the level of expression of two or more

The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fire wipo.int/pub/published_pct_sequences.

```
(GCA), by detecting the level of expression of gene(s) (Gs) identified by CC DNA chip analysis as given in the specification, and comparing the expression level in an unactivated CC GC, where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M3) CC chronic) in a tissue, an allergic response in a subject, exposure of a Subject to a pathogen or sterile inflammatory disease using the CC gene expression profile; (3) detecting (M4) an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a Subject to a pathogen or sterile inflammatory disease, by detecting the CC subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from Gs, where CC the level of expression of the gene is indicative of inflammation; (4) treating (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject to a pathogen or sterile inflammatory disease, by detecting the cor sterile inflammation (especially chronic) or in a tissue, and allergic response in a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, and allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, and allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. M1 is useful for detecting GCA, M2 is useful for modulating GCA and is useful for screening and the pathogen of modulation                                                                                                                                     modulating GA; M3 is useful for screening an agent capable of modulating GCA preferably in an inflammation in a tissue; M4 is useful for detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, renal reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Note: The sequence data for this patent did not form part
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID No 68; 114pp; English

                                                                                                       The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are commedical conditions e.g. by protein or gene therapy. The genes are commedical conditions e.g. by protein or gene therapy. The genes are commedicated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antiagonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast cand ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (c) immune disorders e.g. Addison's disease, allergies, autoimune chemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's contis; (c) cardiovascular disorders such as myocardial ischaemias; (c) cardiovascular disorders such as myocardial ischaemias; (c) cardiovascular disorders such as myocardial ischaemias; (c) cardiovascular diseases e.g. cerebral anoxia and cc epilepsy; and (f) infectious diseases such as viral, bacterial, fungal cand parasitic infections.

CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly continued at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                              The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             17-NOV-
